

Precautions

- Read this instruction manual carefully to ensure correct use of this product. Store this document in a safe place for future reference.
- MUJI is not responsible for any accident or injury caused by improper installation or usage of this product. (See Figures 1 through 6)
 - Stop using this jug immediately if you notice any fine scratches or cracks that could lead to greater damage to the product.
 - Do not place any of the following items in this jug:
 - Dry Ice, carbonated liquids, liquids that may ferment: Such items may increase the internal pressure of this jug, causing it to burst.
 - Milk, dairy products, fruit juices: Such liquids may lead to decay or changes in product quality.
 - Tea leaves, coffee grounds, fruit pulp, etc.: Such items may cause leaks if they become lodged in the silicone seal.
 - Do not use this jug for long-term storage. Such usage may result in decay or changes in product quality.
 - Do not place in freezers, chest compartments, or other locations with a temperature below freezing. Liquid freezing inside the jug may cause it to crack.
 - Do not carry the jug by the lid. The lid may separate from the body of the jug. (See Figure 6)
 - Do not drop, knock over, or otherwise submit the jug to shock. Doing so may result in cracking or leakage.
 - Do not use this jug in a microwave oven.

How to Use the Jug

- Turn the lid 90 degrees to open for pouring.

- Turn the infusion container to remove or attach.

- When attaching the infusion container, turn it until the holder stops turning.

- When closing the lid, ensure that the silicone seal is correctly positioned, that you are using the right type seal, and that the lid and the spout are aligned and tight.

- There are two types of Silicone Seals for 1L and 2L. They differ in size and color. Using the wrong type of silicone seal may result in leakage. (The 1L silicone seal is dark grey; the 2L silicone seal is light grey)
- If the lid is not closed correctly, the jug may leak when turned on its side.

- If the jug leaks when the spout and the lid are aligned correctly in the closed position, you will need to replace the silicone seal. (If the spout and lid aren't aligned in the closed position, check the position and face of the silicone seal.)

- Always carry the jug by its body

- The lid and body may separate

- Holding the jug by the top grip places stress on the body, and may result in leaks or the lid separating from the body, resulting in damage to the jug.

- Caution: The jug will leak if the silicone seal isn't seated properly. See Figure 5 for proper positioning and face.
